English (Intermediate)

ABOUT ME

Since 2007 I have fond of IT. At first I was engaged in system administration and computer repair. Since 2009 I started to be interested in web technologies as well as graphic design. From 2010 to 2014 I periodically worked as a computer master (in particular, at my school during my studies).

The greatest interest in web programming appeared in 2020, and already in 2021 I started working in the field of freelance website development.
